

## Listing of Claims

### In the Claims:

Please cancel claims 6-8 and 12-17, without prejudice. .

1. (Original) A liquid crystal display comprising:

a data driving part taking in image display data in response to a clock signal supplied, and causing an image display part to display an image according to the image display data; and

a control part detecting a change pattern of the image display data, and adjusting a phase relationship between the clock signal and image display data according to the detected change pattern.

2. (Original) The liquid crystal display as claimed in claim 1, wherein said control part uses the image display data for three clock periods of the clock signal for detecting the change pattern of the image display data.

3. (Original) The liquid crystal display as claimed in claim 1, wherein said control part delays only the image display data having a logical levels changing for each clock period of the clock signal.

4. (Original) The liquid crystal display as claimed in claim 1, wherein said control part delays the clock signal.

5. (Original) The liquid crystal display as claimed in claim 1, wherein said control part detects the frequency of the clock signal, and adjusts the phase relationship between the clock signal and image data signal according to the detected frequency as well as the detected change pattern.

6-8. (Canceled)

9. (Original) A liquid crystal display comprising:  
a plurality of data driving parts causing a liquid-crystal display part to display an image according to image display data supplied in synchronization with a clock signal;  
a control part supplying the image data signal and clock signal to said plurality of data driving parts; and  
a timing correcting part provided in each of said plurality of data driving parts, and making the clock signal and image display data supplied by said control part have predetermined phase relationship therebetween

10. (Original) The liquid crystal display as claimed in claim 9, wherein:  
said control part detects signal transmission time periods required toward the

data driving parts, generates a correction signal according to the detected data transmission time periods to be sent to said timing correcting part; and

said timing correcting part makes the clock signal and image display data have the predetermined phase relationship therebetween according to the supplied correction signal.

11. (Original) The liquid crystal display as claimed in claim 9, wherein:  
said control part supplies a monitoring data signal common for the timing correcting parts; and

each of the timing correcting parts detects a phase difference between the thus-supplied monitoring data signal and the clock signal, and, thereby, make the clock signal and image display data have the predetermined phase relationship therebetween.

12-17. (Canceled)
